

3M™ Aura™ Particulate Respirator, FFP3, with Valve, 9332+Gen3

The 9332+Gen3 builds on the features and benefits of its predecessors to offer greater comfort. The new Cool Flow™ Comfort valve opens more easily and stays open longer than the original Cool Flow™ valve, allowing more warm air to escape to reduce heat buildup and increase comfort. New braided bands and innovative tabs that offer greater durability and ease of putting on, repositioning and removing them. 3M has also introduced the Safe Guard™ product authentication process, giving the user greater confidence that the product they are wearing is originally from 3M.

- New 3M™ Cool Flow™ Comfort valve. Opens easily, allowing exhaled air to escape for better breathability and comfort
- 3M Advanced Electret Filter Media (AEM), a high-performance filter media designed to make breathing through it easier
- The original triple panel foldable design fits a wide variety of face shapes and sizes. Supplied in individual packaging
- Innovative tabs on the top and bottom panels of the mask (along with the new valve 'grip' feature) allow the mask to be opened more easily to simplify donning and adjusting to the face
- Braided headbands offer greater durability without compromising wearer comfort. Color-coded to easily identify protection level: red for FFP3
