

Renegade ET 300i / ET 300iP

The Renegade TIGs are inverter-based high-frequency stick/MMA and TIG machines that offer a great balance in power-to-weight ratio. Its compact format makes it easy to transport to any workplace. Combined with a high-performance cycle and the ability to use the machine on power grids and long welding cables, this welding machine becomes the best choice for on- and off-site applications. The machine has an automatic supply voltage sensor and can operate with any supply voltage between 208 V and 528 V in three-phase, and 230 V in single-phase
