

ROGUE ES 150I/180I/200I

The Rogue is a solid, rugged power supply for the professional welder. The machine provides cutting-edge welding performance and reliability by using the latest electronic devices and high-performance digital control, ensuring a precise and consistent arc.

The Rogue provides smooth DC (direct current) welding power that allows you to weld a wide variety of metals, including alloy and non-alloy steels, stainless steel, and cast iron. The arc force and hot start settings are adjustable and help the user find exactly the most suitable arc for the job. Being digital, the microprocessor precisely controls all functions and provides best-in-class welding performance across the machine's entire amperage range. The Rogue can be used with electrodes up to 4.0 mm Ø.

The Rogue can easily perform TIG welding tasks using a "Lift Tig" starter. Equip the power source with the optional TIG torch with built-in gas valve, regulator and gas bottle, and you're ready to weld carbon steel or stainless steel with or without filler material.

- Superior bow features: smooth and stable performance.
- Generator Compatible: Suitable for use with generators (7kW recommended).
- Easy to use: Adjust the welding current and weld with excellent results.
- Convenient Design: Makes the power supply easy to transport, allowing it to be used in almost any workplace.
- Robust design: IP23S grade designed for the manufacturing workshop or construction site applications.
- Power Factor Correction (PFC) ensures a stable arc, resistant to power fluctuations even when working with long cable runs of up to 100 m (PRO version only).
