

Stainless steel industrial drains

The drains for industrial use, manufactured in AISI 304 and AISI 316L Stainless Steel, provide a large evacuation capacity and are mainly aimed at the industrial world where large flows of liquids are generated by water from cleaning, industrial devices, emptying of tanks. , etc. The drains are completely removable and searchable, facilitating the cleaning of the installation and can also act as a siphon trap. All elements of industrial sinks are removable:

- Rounded bodies that prevent the accumulation of dirt and facilitate cleaning. Polished welds eliminate sharp edges ensuring safe installation and cleaning.
- Wide variety of types of gratings suitable for different load classes and according to their applications.
- Baskets for collecting solids.
- Very functional and easy-to-maintain removable siphons provided with EPDM sealing gaskets.
- Stainless steel flanges and screws.
