

Horizontal and compact clamping elements

Applications

Stainless steel fasteners are resistant to corrosion and aggressive chemicals. Articulated lever elements in stainless steel version are preferably used in devices in the chemical and food industries.

Characteristics

- Steel resistant to corrosion and high temperatures.
- Smooth and burr-free surfaces through electric polishing.
- Ergonomically shaped plastic handle resistant to solvents, oils, greases and other chemical agents (except models 205-SSS and 205 USS).

Accessories

- Stainless steel compact horizontal clamping elements are generally supplied with standard stainless steel pressure spindles.

Models

- 205-SSS 70 mm long force 250 (N) [Access to catalogs](#)
- 205-USS 68 mm long force 250 (N) [Access to catalogs](#)
- 213-USS 105 mm long force 700 (N) [Access to catalogs](#)
- 215-USS 140 mm long force 900 (N) [Access to catalogs](#)
- 217-USS 163 mm long force 900 (N) [Access to catalogs](#)
- 225-USS 171 mm long force 2200 (N) [Access to catalogs](#)
- 227-USS 189 mm long force 2200 (N) [Access to catalogs](#)
- 237-USS 273 mm long force 3400 (N) [Access to catalogs](#)
- 305-USS 57 mm long force 650 (N) [Access to catalogs](#)
